

BFP Bird Friendly Building Orientation Checklist

This checklist is meant to be completed in conjunction with the online Bird Friendly Building Orientation videos. After viewing these videos to learn more about the hazards wild bird populations face due to buildings, it is recommended that the following checklist be carried out at your building to determine which areas of improvement would be relevant. Once identified, BFP will work with you and your organization on a strategy to implement some mitigation measures that will allow your building to work towards being certified as a Bird Friendly Building. Other BFP certifications available a www.birdfriendlypeterborough.ca/.
